PROFESSIONAL SUMMARY

BSc Computer Science graduate (University of Pretoria) passionate about building software that is efficient, solves real-world problems and that makes people's lives easier. A motivated and adaptable technology professional who enjoys learning new technologies, solving complex problems, applying software engineering principles, and growing my leadership skills. Willing to relocate and currently seeking opportunities to contribute to innovative technology teams while continuing to grow as a software engineer.

TECHNICAL SKILLS

Languages: C++, Java, Python, Javascript

Web Technologies: HTML, CSS, JavaScript, React, Node.js, Figma

Frameworks: Spring Boot, Express.js, Tailwind CSS

Databases: MySQL, MongoDB, PostgreSQL

Dev Tools: Git, GitHub, VS Code, Postman, Docker

Other: REST APIs, JSON, OOPs, Data Structures & Algorithms, Agile/Scrum

PROJECTS

Future Feed (Capstone Project): React, Tailwind CSS, Shadcn/UI, Javascript, Java, PostgreSQL, Node.js, Python

- Led a 5-person engineering team through a full-cycle capstone project for real-world client Epi-Use, translating stakeholder requirements into a working product roadmap and sprint plan.
- Architected and built a social media platform giving users direct control over their feed through customizable presets and AI-powered content bots — addressing algorithmic-feed fatigue with a user-owned alternative.
- Coordinated a full-stack team across frontend, backend, and database layers. Together with being the team lead, I was also part of the frontend and Integration team.
- Deployed the production system on Vercel and AWS.

LinkForge: Java, Docker

- Designed and built a distributed URL shortener backend from scratch, implementing production-grade systems patterns: caching, async job processing, and rate limiting under simulated distributed failure conditions.
- Engineered secure, stateless authentication (JWT) and a consistent error-handling contract across all endpoints to ensure predictable API behavior under failure.
- Implemented scheduled cleanup jobs and usage analytics, containerized with Docker for reproducible deployment.

CodeSentinel: HTML, CSS, Javascript, Python

- Built and deployed an AI-powered static analysis tool (Groq/Llama 3.3 70B) that scans GitHub repositories or uploaded codebases and flags bug risks, security vulnerabilities, and complexity issues in seconds.
- Shipped a full production pipeline (Render backend, Netlify frontend) with automated uptime monitoring (UptimeRobot) to eliminate cold-start downtime — taking the project from idea to live tool in a single day.

To-do - Modern Task Manager: HTML, Javascript, Tailwind, PHP, phpMyAdmin, SQL

- Built a full-stack task management app with secure user authentication and complete CRUD functionality on a relational SQL backend.
- Designed a clean, responsive UI focused on daily-use efficiency over feature bloat.

Advanced Hangman: Python

- Evolved a simple terminal game into a structured, testable GUI application using Agile/iterative development principles across multiple release cycles.

- Applied test-driven practices to ensure reliability as complexity grew from CLI to full GUI.

My QR: HTML, CSS, JavaScript, Python

- Designed and built a responsive QR-code scanner and generator, handling real-time camera input and dynamic code generation client-side.

Portfolio Website: React, Tailwind CSS, Shadcn/UI

- Designed and built a responsive personal site showcasing projects, resume, and background; deployed on Vercel.

EDUCATION

Bachelor of Science in Computer Science 2023 – 2026

University of Pretoria

CERTIFICATIONS

- Free Python Course - GeeksForGeeks

LANGUAGES

English – Professional Working Proficiency

Sesotho - Mother Tongue

Afrikaans - High-School level
